MD Ziauddin

AI Engineer | Building Production AI Systems | LLMs, RAG, Agentic Workflows | Forward Deployed Engineer Background
West Bengal, India

Summary

I'm a software engineer focused on turning complex AI systems into reliable production products. Over the past 5+ years, I've evolved from building frontend applications to designing full-stack platforms, and today I work as a Forward Deployed Engineer, delivering enterprise Voice AI systems. My work sits at the intersection of engineering, product, and customer success—helping organizations design, deploy, and operate AI solutions that solve real business problems. I've worked across both enterprise client engagements and product companies, contributing to platforms used by global organizations including VMware, leading AI-powered fintech initiatives, and now building production Voice AI systems at OmniDimension.

Experience

OmniDimension

1 year

Forward Deployed Engineer (FDE)

February 2026 - October 2026 (9 months)
Kolkata, West Bengal, India

• Promoted from Software Engineer to Forward Deployed Engineer within three months to lead enterprise Voice AI deployments, customer integrations, and production operations.
• Served as the technical owner for customer deployments from solution design through production launch and post-deployment optimization.
• Lead technical onboarding, issue triage, technical solution design, and cross-functional coordination between customers and engineering.
• Partner with enterprise customers to translate business requirements into production-ready Voice AI solutions.

Highlights:

• Production Scale & Outreach: Built and deployed Voice AI workflows supporting healthcare campaigns that processed over 1,000,000 outbound calls across multiple enterprise deployments, leading to expanded customer adoption.
• Voice AI Profiling & Integration: Evaluated and benchmarked diverse combinations of LLMs, TTS, and STT models across the core Voice AI infrastructure. Identified optimal model configurations for distinct industry use cases, accelerating domain-specific customer onboarding and the deployment of optimized voice agents.
• Enterprise System Integrations: Integrated Voice AI workflows with enterprise CRM systems (including Odoo and LeadSquared), scheduling platforms, and third-party APIs to deliver end-to-end automated solutions.
• Patient Qualification Pipelines: Designed and optimized AI voice workflows for patient qualification and appointment booking, contributing to 50 qualified consultations during the first month while improving lead qualification accuracy and booking efficiency.
• E-Commerce Deployment & Triage: Led technical deployment of a new e-commerce Voice AI integration, acting as the primary engineering liaison during launch. Triaged live production issues, reproduced defects, validated root causes, and coordinated fixes across core engineering teams.

Software Engineer – GenAI
November 2025 - February 2026 (4 months)
Kolkata, West Bengal, India

• Built foundational GenAI capabilities powering production Voice AI systems, focusing on latency mitigation, automated quality evaluation, and operational analytics.

Key Engineering Contributions:

• Conversational Latency Mitigation: Designed a contextual filler system that maintained natural conversations during LLM and backend response latency, significantly reducing perceived wait time during live calls.
• AI Evaluation & Compliance: Built an automated AI evaluation pipeline that assessed call recordings against operational SOPs and proprietary scoring criteria, enabling scalable quality assurance for production Voice AI conversations.
• Event-Driven Architecture: Developed an event-driven notification framework supporting broadcast, user-specific, and rule-based alerts integrated into the Voice AI platform.

• Data & Analytics Infrastructure: Built reporting infrastructure that generated automated campaign analytics and operational summaries for internal teams and enterprise customers.

GROWWTH PARTNERS

Senior Software Engineer

July 2024 - November 2025 (1 year 5 months)

Kolkata, West Bengal, India

Worked as a Senior Software Engineer, leading the architecture and development of AI-powered fintech products. Partnered with engineering, product, and business stakeholders to modernize platform capabilities, improve system performance, and establish scalable engineering practices.

Highlights

• Platform Modernization: Architected the transformation of an AI-powered fintech platform, reducing application latency by 90% and accelerating release cycles by 40% through scalable system design and engineering improvements.
• Real-Time AI Architecture: Designed and implemented a WebSocket-based real-time communication architecture that transformed a traditional web application into an interactive AI assistant experience.
• Platform & Engineering Ownership: Owned the end-to-end system design for AI Assistant and Referral Engine initiatives, leading architecture decisions, technical reviews, and implementation across multiple product releases.
• Developer Experience: Built a reusable React GAS framework that standardized frontend development, improved code quality, and accelerated engineering velocity across teams.
• Technical Leadership: Mentored four junior engineers through architecture reviews, code reviews, and technical guidance, fostering engineering ownership and improving delivery quality.

copods - partners in your digital journey

Software Engineer

August 2021 - April 2024 (2 years 9 months)

Pune Division, Maharashtra, India

Worked as a Software Engineer at Copods, delivering production-grade full-stack solutions for enterprise clients across infrastructure and virtualization domains. Embedded within customer engineering teams to design, build, and ship enterprise software.

Enterprise Client Engagements

Client Engagement: VMware — Enterprise Licensing & Subscription Platform (Mar 2022 – Aug 2023)

• Migrated the authentication system to OAuth 2.0, securing legacy APIs and simplifying downstream developer integrations.
• Redesigned and modernized customer-facing licensing and subscription workflows using React, improving usability and aligning with updated product requirements.
• Served as the primary UI engineer for a major branding modernization initiative, redesigning core product interfaces and implementing the updated design system across the application.
• Collaborated directly with VMware product managers, designers, and engineers throughout feature development to deliver production features for a global enterprise user base.

Client Engagement: Ariksa — Enterprise IT Visualization (Aug 2021 – Mar 2022)

• Engineered interactive, high-performance data visualization dashboards utilizing AntV G6.
• Built interactive VM relationship graphs that enabled enterprise administrators to visualize and manage infrastructure dependencies.
• Collaborated with backend engineers to build scalable APIs and real-time visualization components for enterprise infrastructure monitoring.

birbal

Frontend Engineer

April 2021 - July 2021 (4 months)
Kolkata, West Bengal, India

• Worked as part of a small team to build MERN Stack applications.
• Strong understanding of JavaScript and React.
• Translated designs and wireframes into high-quality code.
• Built reusable code and components for future use.
• Translated complex Figma designs into high-quality, reusable React components, establishing a foundation for the primary application's UI.

Unique Infotech Pvt LTD

IT/Network Intern

June 2019 - September 2019 (4 months)

Kolkata, West Bengal, India

Assisted in managing 100+ Desktop.

Programmed a .bat file that sped up the setup time by more than 50%.

Design database schema and implement using SQL and python script.

Education

Future Institute Of Engineering and Management

Bachelor of Technology - BTech, Information Technology · (July 2017 - July 2021)
